Pham Viet Anh

Hanoi, Vietnam | 0982 219 935 | vietanhpham1908@gmail.com | github.com/VietAnh-205

Career Objective

Motivated Mathematics and Computer Science student with hands-on experience in machine learning, deep learning, and computer vision. Seeking an AI/ML Engineer position to apply skills in Python, PyTorch, and data-driven modeling to solve real-world problems at scale.

Education

VNU University of Science — *Hanoi, Vietnam*

Bachelor of Science – Mathematics and Computer Science — *Sep 2023 – Present*

- **GPA:** 3.57 / 4.0
- **Academic Awards:**
  - Encouragement Scholarship – VNU University of Science
  - Mathematical Talent Scholarship – Vietnam Institute for Advanced Study in Mathematics (VIASM)
  - Certificate of Academic Excellence – Academic Year 2023–2024
  - Certificate of Outstanding Student – Academic Year 2024–2025

Certifications

AI Course – Samsung Innovation Campus — *2025*

- Completed Samsung's AI program covering machine learning fundamentals, deep learning, and practical AI applications.

Technical Skills

Programming Languages:	Python, C++, Java, SQL
Frameworks:	Spring Boot, PyTorch, Scikit-learn, OpenCV
DevOps & Tools:	Docker, Git, GitHub
Databases:	MySQL
Core Competencies:	Backend Development, RESTful API Design, Machine Learning, Computer Vision
Languages:	Vietnamese (Native), English (B1 – Intermediate)

Projects

Retail Store Management System | ***Java, Spring Boot, SQL, Docker*** — *2025*

- Designed and implemented a full-featured backend system for retail store operations management.
- Built RESTful APIs with Spring Boot for product inventory, order management, and sales reporting.
- Containerized the application using Docker for consistent and reproducible deployment.
- Managed relational data with SQL, writing optimized queries for high-volume transaction processing.

Lung X-Ray Segmentation & Classification via Deep Learning | ***Python, PyTorch, CV*** — *2025*

- Applied deep learning and computer vision for automated segmentation and classification of lung X-ray images.
- Implemented and fine-tuned CNN-based architectures (U-Net, ResNet) for medical image analysis tasks.
- Preprocessed large-scale medical imaging datasets with data augmentation to improve generalization.

Customer Credit Score Classification | ***Python, Machine Learning, Scikit-learn*** — *2026*

- Developed a machine learning pipeline to classify customer credit scores from personal financial data.
- Applied feature engineering, data preprocessing, and classification algorithms.
- Evaluated model performance using cross-validation; generated analytical reports and visualizations.
